

## Competencies

By the end of their training our students are expected to be competent:

scientific-practice  
ethics  
human development  
diversity  
teaching and learning

By this we mean:

1. We want to educate our students to understand and apply various inquiry skills in their professional careers, thus demonstrating that research and scholarly activities are an integral component of their professional identity.
2. We want to educate our students to integrate scientific principles and knowledge with professional practice.
3. We want to educate our students to be sensitive to issues of individual differences and multiculturalism.
4. We want to develop students who understand that optimal human functioning and adaptation occurs across an individual's life-span.
5. We want to educate our students to be proactive in their application of accepted standards of ethical and professional conduct.
6. We want to educate our students to understand that teaching and learning are integral to their intellectual development.
